

Vrishabh Bhavsar

SOC Analyst | Incident Responder | Threat Hunter

(562) 755-2456 | vrishabhbhavsar@gmail.com | linkedin.com/in/cyberrookie | github.com/VB-1405 | Long Beach, CA 90815

PROFESSIONAL SUMMARY

Cybersecurity Master's student (CSUDH, Dec 2026) with hands-on SIEM/SOAR experience from a 6-month security operations internship, active freelance consulting, and a Top 1% TryHackMe global ranking. CTF competitor with 2nd place at ToroHack 10.0 and 3rd place at ToroTechDay. Built and published CTI Hub v2 — a full-stack threat intelligence platform scored 99% in graduate coursework — and engineered a production SOC alert automation pipeline using n8n, Seceon OTM API, and Google Sheets for a live freelance client. Holds CompTIA Security+, AWS Cloud Practitioner, and FortiSOAR certifications. Seeking SOC Analyst, Incident Response, or Cybersecurity Analyst roles to apply threat detection, log analysis, and automation skills in a production security environment.

TECHNICAL SKILLS

SIEM / SOAR: Splunk (SPL), Elasticsearch/Kibana, Securonix, Seceon OTM, FortiSOAR, NXLog, IBM QRadar (familiar)

Incident Response: Alert triage (Tier 1/L1), true/false positive analysis, MITRE ATT&CK, IOC correlation, phishing analysis, malware containment, escalation procedures

Threat Intel & Hunting: MITRE ATT&CK TTP mapping, ransomware TTPs, data exfiltration, lateral movement, OSINT, TryHackMe Top 1%

Offensive Security: XSS, SQLi, File Injection, Command Injection, Pass-The-Hash (T1550.002), Privilege Escalation, XDR validation, phishing simulation

Detection Engineering: SPL detection rules, Sysmon, Winlogbeat, Sigma rules, CAPA malware analysis, Kibana dashboards

Automation & Scripting: Python, PowerShell, Bash, n8n workflow automation, JavaScript; custom log connectors, API integration

Networking & Cloud: TCP/IP, DNS, firewalls, IDS/IPS, Wireshark, Nmap; AWS (Cloud Practitioner), Azure, Microsoft Defender for Identity, Docker

Systems: Windows Server 2022, Active Directory, Linux (Ubuntu/Kali), macOS

Languages: English, Hindi, Gujarati (fluent); Spanish, German (learning)

ACHIEVEMENTS & CTF COMPETITIONS

- **TryHackMe** — Top 1% globally; completed SOC, threat hunting, and blue team learning paths.
- **2nd Place** — ToroHack 10.0 CTF, California State University Dominguez Hills (2025); highest individual scorer.
- **3rd Place** — ToroTechDay CTF, California State University Dominguez Hills (Fall 2024).

EXPERIENCE

Freelance Cybersecurity Consultant
Self-Employed

March 2025 – Present
Remote

- Engineered a two-workflow production SOC alert automation pipeline using n8n, Seceon OTM API, Google Sheets, and Gmail — replacing bulk-email notifications with a severity-routed, SLA-tracked 3-tier escalation system (30-min analyst → 2-hour L2 → 3-hour L3), implementing idempotent state management to guarantee exactly-once notification delivery.
- Simulated 10+ real-world attack scenarios per engagement including XSS, SQLi, Command Injection, Pass-The-Hash (T1550.002), and Privilege Escalation to validate client XDR detection coverage — identifying an average of 4–6 detection gaps per engagement.

- Assisted with phishing simulation campaigns targeting 50+ employees, producing security awareness reports with remediation recommendations to improve organizational resilience.
- Produced 15+ structured security assessment reports documenting adversary TTPs, IOCs, and prioritized remediation roadmaps for client security teams.

Security Operations Intern

TechDefence

Dec 2023 – Jun 2024

Ahmedabad, India

- Monitored 500+ daily security events across enterprise SIEM platforms (Securonix), performing Tier-1 triage and maintaining 90%+ true/false positive classification accuracy across Windows Event Logs and multi-source telemetry.
- Assisted with 60+ incident investigations involving ransomware campaigns and data exfiltration events, contributing to root cause analysis and producing structured incident reports mapping findings to MITRE ATT&CK techniques.
- Created SIEM detection rules for brute force (T1110), Pass-The-Hash (T1550.002), and lateral movement — configuring MITRE ATT&CK technique IDs directly into alert policies, reducing analyst investigation time by approximately 30%.
- Built 5+ custom PowerShell and NXLog log connectors integrating Windows Event Logs and network telemetry into SIEM, expanding monitoring coverage across 10+ client environments.
- Triageed 50+ phishing and malware emails daily from SOC mailbox, escalating confirmed threats per SOPs and contributing to playbook updates that reduced phishing response time by 25%.

Math Tutor — RISE Program

California State University, Dominguez Hills

May 2025 – Present

Compton, CA

- Mentored 25+ students through 1:1 and small-group sessions, improving average assessment performance by approximately 20% — building communication skills applicable to stakeholder-facing incident reporting and cross-functional SOC teamwork.

KEY PROJECTS

CTI Hub v2 — Threat Intelligence & SIEM Platform

github.com/VB-1405

- Built and published a full-stack threat intelligence platform integrating 9+ OSINT API sources, malware analysis via CAPA, Elasticsearch and Splunk HEC SIEM shipping, JWT authentication, RBAC, SQLite scan history, admin panel, and Docker deployment — scored **99%** in CYB-590 graduate SOC Platforms course.
- Designed Kibana dashboards with MITRE ATT&CK technique mapping, Threat Score, Verdict Distribution, IOC tracking, and Scan History panels.

SOC Alert Automation Pipeline

github.com/VB-1405

- Engineered a production two-workflow SOC automation system (n8n + Seceon OTM API + Google Sheets + Gmail) replacing manual bulk-email alerts with a severity-routed, SLA-tracked escalation pipeline — resolving 3 critical engineering bugs including silent type-coercion failures and data-integrity race conditions.
- Built a synthetic test-data seeder enabling controlled, repeatable SLA timing tests without requiring live alert data.

Home SOC Lab — Enterprise AD Attack & Defense

github.com/VB-1405

- Built a multi-machine enterprise Active Directory lab: Windows Server 2022 DC, Windows 11 endpoint with Sysmon and Winlogbeat, Kali Linux attacker, and Splunk Enterprise SIEM.
- Created SPL detections for Kerberoasting (T1558.003), Pass-The-Hash (T1550.002), DCSync (T1003.006), and PsExec lateral movement — all validated against live attack simulations.

AI-Based IDS for Healthcare IoT Devices

github.com/VB-1405

- ML-powered IDS for healthcare IoT using anomaly detection and supervised classification to identify malicious traffic targeting medical devices — a high-stakes, underserved attack surface.

EDUCATION

Master of Science — Cybersecurity

Jan 2025 – Dec 2026 (Expected)

California State University, Dominguez Hills — Carson, CA

Coursework: Network Security, Ethical Hacking, Digital Forensics, Cloud Security, SOC Investigation Platforms

Bachelor of Engineering — Computer Science

Sep 2020 – Jun 2024

Parul Institute of Engineering and Technology — India

CERTIFICATIONS & TRAINING

- **CompTIA Security+** (SY0-701) | **AWS Cloud Practitioner** (CLF-C02) | **FortiSOAR Analyst & Responder** — Fortinet NSE
- **Microsoft Defender for Identity** — Microsoft Learn | **Seceon Cyber Security Analyst** | Introduction to IoT — Cisco
- *In Progress:* CompTIA CySA+ | AWS Solutions Architect Associate (SAA-C03)

VOLUNTEER & COMMUNITY

- Volunteered at multiple college fests, technical events, and youth-focused NGOs during undergraduate studies, supporting event coordination, community outreach, and educational initiatives.
